About Me

Senior software engineer with over 5 years of development expertise in Golang, Javascript, Typescript and scalable microservice and event-driven architecture. I specialize in full-stack development using React, Next.js, and Tailwind CSS, delivering high-performance solutions that ensure seamless user experiences. Proficient in cloud computing on AWS, Google Cloud Platform, alongside NoSQL and SQL databases like MongoDB, PostgreSQL, and Sqlite. Skilled in RESTful APIs, Test-Driven Development (TDD), and Agile methodologies to build optimized and resilient applications that enhance business outcomes.

Skills

Languages	Golang, Javascript, Typescript, Java, Bash
Back-end	ServeMux, Gin, Echo, Express, Nest.js, Hono
Front-end	React, Next.js, Tailwind CSS
Databases	PostgreSQL, MySQL, Sqlite, MongoDB, Neo4j
Messaging	RabbitMQ, GCP Pub/sub
Architecture	Microservices, Event-driven Architecture, CQRS
Clouds	AWS, GCP
Tools	Jira, Git, Github, VSCode, Linux

Experience

Back-end Developer (Golang) , The Moonshot Factory – Remote	Sep 2024 – Present
• Resolved microservice timeouts caused by long-running SQL queries by migrating several services from PostgreSQL to Neo4j, drastically improving query times from over 1 minute to just 300ms.	
• Addressed the challenge of inconsistent access control policies across microservices by developing an authorization framework for GraphQL APIs. This solution enabled microservices to define their own specific user access controls, significantly reducing code duplication and accelerating the addition of new features	
• To enable detailed analyses of business IT asset inventory data from diverse cloud environments, I developed AWS and GCP service integrations that facilitated on-demand and event-driven crawling, providing consistently up-to-date asset insights.	
Full-stack Developer (React & NodeJS) , Stack360 – Lahore, Punjab	Nov 2023 – Sep 2024
• To ensure reliable communication and support for offline services within a microservices architecture, I developed and deployed an RPC communication mechanism utilizing RabbitMQ which dramatically enhanced overall system resilience.	
• I addressed the critical challenge of processing large QR code batches by implementing a background job processing system in NodeJS. This solution enabled the product to reliably handle the generation of thousands of QR codes daily.	
Software Engineer, (React, NodeJS, Golang) , OSO Software Outsourcing – Lahore, Punjab	Aug 2020 – Oct 2023
• Due to increased workloads, I solo-implemented a back-end system featuring over 150 REST endpoints and 400 integration tests within three months, ensuring the project's smooth launch and stable operation.	
• To automate the initial candidate screening for an HR firm, I developed a web application utilizing AI technologies (OpenAI, D-ID, Whisper). This solution enabled fully autonomous candidate screening, drastically reducing manual effort.	
• Addressed the challenges of drafting complex legal documents by developing a platform enabling legal firms to dynamically create, digitally sign, and share legal documents. This made the entire process significantly easier and quicker.	
• Held sessions with clients to outline scope of work, system requirements and workflow documents for 20+ projects, leading to effective project planning and costing-estimation.	

Education

Pak AIMS – Bachelors of Computer Science	2020
National Grammar School – A-Levels	2013
